

## Gas Cartridge Disposal

**Q. How should I dispose of gas cartridges after I've used them?**

**A. Make sure you have completely used up all the gas in the cartridge.**

- When disposing of a gas cartridge, shake it to check whether any gas is remaining. If you hear something shaking around inside, that means it still contains gas. Use the gas cartridge, such as for boiling water, until it is completely empty.
- Disposing of gas cartridges that still contain gas may cause fires or explosions inside garbage trucks if the cartridges leak.
- Follow all local regulations in your area regarding proper disposal.
